Your home is your sanctuary; unless, of course, you are one of the millions of people who suffer from indoor allergies. Tiny triggers such as dust mites, pet dander and mold can lurk behind your front door, causing sneezing, congestion, itchiness and even asthma. But you can take steps to reclaim your home from these microscopic invaders. Follow these tips – one for every room of the house – to reduce your symptoms.

Talk to your doctor about even more ways to manage your allergies.

**THE ALLERGY-FREE HOUSE**

**BEDDING** is a dust mite’s paradise. To thwart this common trigger, wash your sheets in hot water every week.

Crack down on the mold in the **BATHROOM** by reducing moisture. Use an exhaust fan during baths and showers and fix leaky fixtures right away.

Use air conditioning instead of opening **WINDOWS**. This keeps pollen out and reduces humidity, which helps ward off dust mites and mold.

Gross but true: Cockroach droppings can trigger allergy symptoms. Keep your **KITCHEN** clean by using lidded trash cans and washing dishes immediately.

If you’re sensitive to **PET** dander but don’t want to say goodbye to your pet, replace carpeting with tile or wood flooring. And keep pets out of the bedroom.

Time to redecorate! Replace upholstered **FURNITURE** with items made of leather, wood and metal.

Limit the number of **INDOOR PLANTS** to further reduce mold.

Pollen can sneak into your home by hitching a ride on your pets and your clothes. After a long day **OUTDOORS**, take a quick shower and change your clothes.
